

Sachin Phapale

 Brussels, Belgium |  +32 478780898 |  sachinphapaleofficial@gmail.com |  [linkedin.com/in/sachin1337](https://www.linkedin.com/in/sachin1337)

Senior Java Developer | Event_Driven | Cloud - Native | DevOps | Platform Operations | AI-Assisted

CORE SKILLS

Programming: Java 8/11/17, JavaScript, TypeScript, SQL, Python, Bash

Java & Spring: Spring Boot, Spring Framework, Spring MVC, Spring Data, Spring Security, JPA, Hibernate, Spring Batch

Backend: REST APIs, Microservices, Web Services, gRPC, JSON, API Integration

Architecture: Object-Oriented Design, SOLID, Design Patterns, Clean Code, Distributed Systems, Event-Driven Architecture

Messaging: Apache Kafka, RabbitMQ, MQTT, WebSocket

Databases: MySQL, MongoDB, SQL

Cloud & Containers: AWS, Microsoft Azure, Docker, Kubernetes, Helm, Terraform

CI/CD & DevOps: GitLab CI/CD, Jenkins, Bamboo, Maven, CI/CD Pipelines, Infrastructure-as-Code

Testing: JUnit, Mockito, Unit Testing, Integration Testing, API Testing, SonarQube

Monitoring: DataDog, Application Logging, Monitoring, Troubleshooting, Root Cause Analysis

Frontend: React.js, HTML5, CSS3, Bootstrap

Tools: Git, Jira, Confluence, Swagger/OpenAPI, IntelliJ IDEA, Nexus IQ

AI Engineering: Generative AI, AI-Assisted Development, LLM-Based Development Workflows, Agentic Programming Concepts

CERTIFICATIONS

Certified Information Security & Ethical Hacker (CISEH)

Elements of Electrical & Electronics Technology

Diploma in Computer Architecture & Networking

EDUCATION

Bachelor of Engineering in Computer Science and Engineering (CSE)
Savitribai Phule Pune University

PROFESSIONAL SUMMARY

Senior Java Developer with 5+ years of experience designing, developing, testing, and maintaining enterprise applications and distributed backend systems. Strong hands-on expertise in Java 8/11/17, Spring Boot, Spring Framework, REST APIs, Microservices, Spring Data, JPA, Hibernate, Apache Kafka, RabbitMQ, SQL, and NoSQL databases. Experienced in building scalable, resilient, and maintainable applications, implementing event-driven architectures, developing automated tests, troubleshooting production issues, and contributing to CI/CD and cloud-native deployments. Strong understanding of Object-Oriented Design, SOLID principles, design patterns, clean code, distributed systems, Agile/Scrum, and AI-assisted software development.

PROFESSIONAL EXPERIENCE

Software Engineer

Toyota Motors Europe (via Infosys) — Brussels, Belgium | Apr 2021 – Present

- Designed, developed, tested, and maintained enterprise applications using Java 8/11/17, Spring Boot, REST APIs, and microservices.
- Developed scalable backend services using Spring Boot, Spring Data, JPA, and Hibernate for distributed applications.
- Built RESTful APIs and Web Services supporting integration between enterprise and distributed application components.
- Applied Object-Oriented Design, SOLID principles, design patterns, clean code, and reusable architecture practices.
- Developed event-driven services using Apache Kafka and RabbitMQ for reliable asynchronous communication.
- Worked with PostgreSQL, MySQL, MongoDB, SQL, JPA, Hibernate, and Spring Data for enterprise data management.
- Developed unit and integration tests using JUnit and Mockito to improve reliability, code quality, and regression coverage.
- Performed debugging, root-cause analysis, technical investigation, and performance optimization across application layers.
- Participated in technical design discussions, architecture reviews, code reviews, and continuous improvement initiatives.
- Collaborated with architects, developers, QA, DevOps, product teams, and stakeholders in Agile/Scrum environments.
- Contributed to CI/CD pipelines using GitLab CI/CD, Jenkins, Maven, and automated build and deployment workflows.
- Supported Docker and Kubernetes deployments across AWS and Microsoft Azure environments.
- Supported production readiness through monitoring, troubleshooting, deployment validation, documentation, and operational support.
- Applied secure coding practices and used AI-assisted development workflows for coding, debugging, testing, and documentation.

KEY ACHIEVEMENTS

- Improved application scalability and reliability by contributing to microservice-based architectures, event-driven processing, distributed systems, and Kubernetes deployments.
- Reduced implementation costs by approximately €2M through a backward-compatible technical solution while maintaining application stability, scalability, and reliability.
